

数値地質図 G-11

「東・東南アジア地質災害デジタルマップ（英文）第2版」

発行年：2006

Introduction

This CD-ROM contains the interactive version of the geological hazard map of East and Southeast Asia. The paper version of the maps was published in 2002 (see Kato, 2002).

The production of this CD-ROM aims to easily provide more extensive information about geological hazards not possible in the paper format. The geological hazard maps and other related information are presented in an interactive way through the use of GeoHazardView software. The program is also used in the management and update of the geological hazard information.
